Technical Data Sheet

NorthQuest 2100

NorthQuest 2100 is a Carboxylate Sulphonate Copolymer used in boiler treatment and pulp/paper processing. It is designed to provide superior stabilization of Calcium Phosphate and demonstrates excellent stabilization of Zinc and Calcium Carbonate. NQ2100 is widely used in Cooling Water for phosphate and zinc or “all-organic” based treatment programs. It works as a strong dispersant, holding silt and other suspended solids in suspension and prevents fouling. It also provides superior Iron tolerance in the presence of soluble Iron in the system. CAS# 40623-75-4
